

Project Title	Rising Waters: Machine Learning Based Flood Prediction System		
Developer	N. Joshnavi devi	Team ID	[Team ID]
Date	2 July	Phase / Document	Project Demonstration

21. Team Involvement in Demonstration

This is an individual (solo) project. There is no team; all phases — ideation, requirement analysis, design, planning, development, testing, documentation, and demonstration — were carried out solely by the developer listed below.

Where a team-based submission would typically assign each design-thinking phase, each layer of the architecture, and the final demonstration to different members, all of those responsibilities were held by one person throughout this project. The table below is included to satisfy the standard reporting format, mapping each phase explicitly to the sole contributor.

Phase	Role Performed By
Ideation & Requirement Analysis	Syed Fathima Nasreen
Design & Architecture	Syed Fathima Nasreen
ML Model Development (train.py)	Syed Fathima Nasreen
Backend Development (app.py)	Syed Fathima Nasreen
Frontend Development (templates/index.html)	Syed Fathima Nasreen
Testing & Documentation	Syed Fathima Nasreen
Demonstration	Syed Fathima Nasreen
