

Project Title	Rising Waters: Machine Learning Based Flood Prediction System		
Developer	N. Joshnavi devi	Team ID	[Team ID]
Date	1 July	Phase / Document	Project Documentation

16. Project Documentation

Documentation for Rising Waters exists at three levels of granularity: a top-level README aimed at anyone who wants to run the project, inline structure within the code itself aimed at anyone reading or modifying it, and this consolidated submission document aimed at academic evaluation. Keeping these three separate, rather than trying to serve all audiences from one file, keeps each one focused and appropriately detailed for its reader.

- README.md — covers project overview, features, technology stack, setup/installation, training instructions, and usage steps.
- Inline code structure in app.py and train.py — organized into clearly delimited, commented steps (data loading, cleaning, scaling, training, evaluation, serialization).
- notebook.ipynb — exploratory data analysis artifact supporting the training pipeline.
- This submission document — consolidated design-thinking, planning, development, and testing documentation for academic evaluation.
- GitHub repository (source code, README, and version history): <https://github.com/joshnavi05/Raising-waters>

Together, these artifacts mean the project can be picked up cold by a new reader — a course evaluator, a future collaborator, or the developer themselves after time away — without needing a walkthrough from the original author.
