

Project Title	Rising Waters: Machine Learning Based Flood Prediction System		
Developer	N. Joshnavi devi	Team ID	[Team ID]
Date	1 July	Phase / Document	Project Documentation

17. Communication

As this is a solo project, formal team communication ceremonies (stand-ups, sprint reviews) do not apply. Communication was maintained through the following channels instead, each serving as a substitute for the coordination that would otherwise happen between teammates:

- README.md updates documenting progress and usage instructions for any future reader/collaborator.
- GitHub commit history serving as a running log of development decisions and changes.
- Periodic check-ins with course faculty / mentor regarding project scope and submission requirements.

This trail also doubles as an audit log: if a design decision (such as the 75%/40% severity thresholds) needs to be revisited later, the commit history and README changelog make it possible to trace when and why it was introduced.
